Command Palette	P
Quick Open File	P
Global Search	F
Toggle Sidebar	B
Toggle Terminal	
Split Editor	\

II. REMOTE DEV & SSH

Connect Host	<i>Remote-SSH: Connect to Host...</i>
Kill Server	<i>Remote-SSH: Kill VS Code Server</i>
Config File	<i>Remote-SSH: Open SSH Config File</i>

Tip: Use the **Ports** tab to tunnel local LLM UIs or self-hosted dashboards from remote nodes.

III. TERMINAL MASTERY

New Terminal	
Split Terminal	\
Clear Terminal	K
Scroll Up/Down	PgUp/PgDn

IV. AUTOMATION (ANSIBLE/TF)

Trigger Suggest	Space
Format Doc	F
Go to Definition	F12
Peek Definition	F12
Fold Code	[

Essential for managing large HCL modules or YAML playbooks.

V. ADVANCED EDITING

Add Cursor Above	
Add Cursor Below	
Select All Occurrences	L
Move Line Up/Down	
Copy Line Up/Down	
Comment Line	/

VI. GIT WORKFLOW

Commit All	(in msg box)
Stage Changes	<i>Click [+] in SCM View</i>
Git Graph	<i>Visualize merges/branches</i>

HARDENED ENVIRONMENT TIPS

- SECURITY** Disable telemetry in settings.json for compliance.
- HOMELAB** Map ~/ .ssh/config for seamless Proxmox/TrueNAS access.
- IaC** Use the **Terraform** and **Red Hat YAML** extensions for schema validation.
